# I WAS DRAINED BY ANAEMIA FOR YEARS

HOW DOES COELIAC DISEASE AFFECT YOU?

Pale skin. Severe fatigue. Shortness of breath. If you're anaemic you'll probably know about it. But what I didn't know is that anaemia can also be a sign of coeliac disease, an autoimmune condition with a wide range of symptoms. There are around half a million people in the UK living with coeliac disease who don't even know it. If you have anaemia you think might be caused by something else, visit our website or call us now.

Coeliac UK campaigns
